MyMathTest Student Access Code: WSSMMT-SMALL-FROND-POONA-STATO-GIBES

Course Requirements

Attendance: You are required to attend class every day, and participate in all class activities. In the event of an emergency, please contact your instructor to discuss making up the missed class time.

Homework: Class assignments will be done online in a program called MyMathTest. Your goal will be to earn the mastery points for each topic in the Study Pan.

- You may attempt a MyMathTest exercise an unlimited number of times before the due date to improve your score.
- You can work on MyMathTest anywhere you have internet access.

Using the Study Plan:

- For each objective, you can try the “Quiz Me” feature right away or you can work through the study plan first.
- You must achieve an 80% on a Quiz Me to earn the mastery points for an objective without completing the study plan.
- If you try a Quiz Me first and don't achieve an 80%, you will work through the study plan for that objective and then re-take the Quiz Me.

If you get stuck on a problem, help is available in MyMathTest.

- Help Me Solve This: This feature gives you step-by-step hints.
- View An Example: This features leads you through an example similar to the problem you are working on.
- Video/Animation: For some problems/topics there are videos or animations to view.
- Ask My Instructor: This feature emails me the problem with any specific notes or questions you include. Expect a 24-hour turn around during the week and longer on weekends.

Tests: There is a short test for each main topic in the course. These tests are available online in your MyMathTest program. They can be taken during class or at home. Once you earn all the mastery points for a particular unit, you should take that unit test. Your goal is to score at least 70% on each test.

Take JCC Course Placement: On the last day of class you will re-take the course placement test to determine what class you should take for the remainder of the semester. You will be assisted with changing your course if needed.

Determination of Your Final Grade: This is a pass-fail course. In order to earn a passing grade for MAT 019 you must do the following three things:

1. Attend all class sessions.
2. Re-take JC course placement on the last day of class.
3. Fulfill one of the following requirements:
 - Complete all assigned course tests with a score of 70% or better on each test.
 - Earn a minimum of 45 Mastery Points of assigned course objectives.
